Benchmark	MSCI World
Morningstar Category	Global Large-Cap Value Equity

Performance

In the second quarter of 2011, Sparinvest Global Value lost 2.88%. During the same period, the overall equity market – as measured by the MSCI World index – declined by 1.66%. However, the value equity market – measured by the MSCI World Value index – fell 2.24%. We should also note that the fund retains a fair proportion of small cap holdings, and during the quarter, the overall small cap market declined by 2.67%.

Sparinvest Global Value & Index Returns, in %	Q2 2011	YTD
Sparinvest Global Value	-2.88	-4.65
MSCI World Index	-1.66	-2.58
MSCI World Value Index	-2.24	-2.13
MSCI World Growth Index	-1.08	-3.02
MSCI World Small Cap Index	-2.67	-2.26

MSCI World Index, MSCI World Value Index, MSCI World Growth and MSCI World Small Cap Index are all indices that contain a broad selection of companies from all over the world. All returns on investment are in EUR.

This means that in the first half of 2011, Sparinvest Global Value has declined by 4.65%, compared with a decline of 2,58% for the MSCI World. In both an absolute and relative sense, these negative returns are largely the result of the tragic earthquake in Japan, and top-down concerns impacting market sentiment, particularly in cyclical sectors. We are not satisfied to see this decline in the market prices of our holdings, but we certainly do not think this reflects an actual deterioration in their quality or prospects: we believe the intrinsic value of these holdings remains robust, and expect to see share prices reflect that in due course.

In the first quarter, the fund had suffered from its relatively high exposure to Japanese equities, which slumped immediately after the early March earthquake. Since that

initial impact, both the Japanese market and our holdings there have staged a strong rebound, but as of end-June there was still a significant negative impact on year-to-date performance. We continue to monitor conditions closely, and a recent visit to some of our investments in Japan confirmed our initial assessment that these companies are resilient and capable of a rapid fundamental recovery. This, combined with low valuations, points to considerable potential.

In the second quarter, the most significant factor in all regions has been the overall weakness in cyclical sectors where the fund has high exposure – such as industrials, consumer discretionary and financials. Energy stocks also lost ground after healthy gains earlier in the year. The fund enjoyed better performance in materials and IT, as well as more traditionally defensive sectors like consumer staples and telecoms, which were relatively robust.

In Europe, these sector exposures led to a small negative return in the second quarter, both in absolute terms and relative to the index. By country, we saw healthy absolute returns in the United Kingdom, France and Sweden, but declines in the Netherlands, Denmark and Germany, a country where we have relatively high exposure.

In North America, after some strong gains in the first quarter, the second quarter saw our holdings – mainly industrial and energy – fall back somewhat, exacerbated by a weakening US dollar. However, on a year-to-date basis our North American holdings remain in positive territory and ahead of the index. Looking over a slightly longer time-period, our North American exposure has gradually been increasing as a result of both share price gains and new investment opportunities.

The recent weakness of cyclical sectors is not surprising, considering the various top-down headwinds: the earthquake, Middle East unrest, and resurgent concern that sovereign debt issues could trigger wider problems. However, we are focussed on long-term value at our holdings, and while carefully analysing the potential impact of macro developments on intrinsic value, we are on the whole encouraged by fundamental earnings developments at our cyclical holdings: we believe they provide strong downside protection with sustainable business models. Current market conditions, which significantly undervalue the long-term earnings power of these companies, offer a buying opportunity.

Portfolio Composition

At the end of the quarter, the cash position was 4.1% of assets under management. The fund had 103 holdings and our ten largest positions accounted for 28.52% of the total.

During the quarter, we made three new investments. We bought shares in RadioShack, a consumer electronics retailer in the United States, while in Japan we invested in Daicel, a chemical company, and Mitsubishi UFJ Financial Group, a banking group.

In general rebalancing of the portfolio, we made additional investments in some existing holdings and reduced others. No positions were entirely exited during the quarter.

For further data on the fund, including complete portfolio holdings, performance and breakdowns by industry and geographical sector, please refer to our website and the latest fund factsheet.

Portfolio Valuation

Valuations continue to suggest that the portfolio has considerable potential. As a rough indication, we amalgamate the holdings into one theoretical company.

This company has a price-to-book of just 1.02 times, compared to 2.16 times for the MSCI World index. The balance sheet is strong, with net-debt-to-equity of just 24% (versus 51% for the MSCI World), and intangibles-to-equity of only 18% (versus 45% for the index).

Earnings-based multiples are also attractive, with many of our holdings poised to see solid earnings expansion as macro conditions gradually improve. The price-to-earnings ratio is 14.9 times for the fiscal year ended, but this drops to 12.9 times Bloomberg estimates for 2011 earnings, and 10.2 times for 2012 (compared with 11.7 times for the MSCI World). EV/EBITDA, which is a useful indicator of the price of companies relative to their raw earnings power, is just 4.7 times 2012 Bloomberg estimates, compared with 6.4 times for the MSCI World.

The fund is invested in a diverse range of companies, whose share prices offer deep discounts to their asset backing and long-term earnings power. We are confident in our belief that this portfolio will generate healthy investment returns over the years to come.

Jens Moestrup Rasmussen

Chief Portfolio Manager

Description

Investment Concept: Value Equities

The Sub-Fund aims at providing a positive return over the long term by investing in equity securities and, to a limited extent, convertible securities and warrants on transferable securities that are admitted to official listing on a stock exchange or that are traded on a Regulated Market within the OECD countries, EU member states (the "EU Member States"), Singapore or Hong Kong. The Sub-Fund will not hold cash for more than 15% of its total assets.
