

Global Small Cap Value Fund Update Q1/08

Performance highlights

Q1 return of -11.35%

Dear Investor

Q1 2008 proved to be yet another challenging quarter for global stock markets. Our fund had a negative return of 11.35%. We are of course very disappointed with this performance, but we take comfort from the fact that the fundamentals of our portfolio holdings have been largely unaffected by the fears of recession and market turbulence. They continue to display healthy earnings and strong balance sheets.

The general equity market as measured by the MSCI World Small Cap Index lost 15.23% in the quarter, while MSCI World Index and MSCI World Value Index had losses of 16.09% and 16.34% respectively. Growth stocks performed slightly better with a negative 15.84%. Despite the discouraging return, our fund outperformed all four indices.

The table below presents the first quarter return and the 2007 return of the fund compared with different stock market indices.

Sparinvest Global Small Cap Value versus Index

	Q1 2008	2007
Sparinvest Global Small Cap Value	-11.35%	-13.67%
MSCI World Small Cap Index	-15.23%	-7.77%
MSCI World Index	-16.09%	-0.77%
MSCI World Value Index	-16.34%	-6.74%
MSCI World Growth Index	-15.84%	3.51%

MSCI World Small Cap Index, MSCI World Index, MSCI World Value Index, and MSCI World Growth Index are indices that contain a broad selection of companies from all over the World. All returns on investments are in EUR. ■

Economics

The first quarter of 2008 has been dominated by the continuing themes of sub-prime related losses and the associated credit crunch, and concerns of a recession in the United States. Central banks – in particular the US Federal Reserve, the ECB, and those of England, Canada and Switzerland – continue their coordinated efforts to ease liquidity pressures, and the Fed has moved aggressively on interest rates. It had cut rates by a total of 100 basis points in Q4 2007, but after an unscheduled meeting on January 22nd the Fed announced a sharp 75 basis point cut, and made a further 50 point cut at its regular meeting eight days later.

Many feared that the liquidity crisis would eventually fell a major US investment bank. March 17th brought the bittersweet news that Bear Stearns had emerged as a victim, but that JPMorgan Chase would acquire the investment bank in a hastily arranged deal involving considerable capital input from the Fed. The following day, another 75 basis point rate cut and relatively encouraging earnings from Lehman Brothers and Goldman Sachs combined to give some solace to markets. Later in March, US Treasury Secretary, Henry Paulson outlined proposals to reorganise government regulation of financial institutions, including a broader role for the Fed.

In Japan, Bank of Japan Governor Fukui ended his tenure, but the appointment of a replacement has been delayed by a stalemate between the ruling Liberal Democrats and the opposition Democratic Party of Japan. A compromise candidate finally appears to have emerged in the form of Masaaki Shirakawa, formerly deputy governor.

The US dollar has fallen steeply during the quarter, approaching EUR 1.60 and JPY 95 in mid-March, although the final two weeks of the quarter have seen some easing of this downward pressure. Perhaps unsurprisingly amid such dollar weakness, rising oil prices have remained another source of pressure on the markets. After New Year highs, prices dropped back to below the USD 90 mark, but rallied again from mid-February, breaking over USD 110 in mid-March. Gold prices have been similarly strong.

Japan is offering some encouraging signs, with preliminary estimates for Q4 2007 real GDP showing 3.7% annualised growth, and February core CPI was up 1.0%: the steepest growth in 15 years. In the US, existing home sales rose in February for the first time in 7 months, but consumer confidence for March emerged at a 5 year low. On April 2nd, Fed chairman Ben Bernanke testified to Congress, warning of the risk that the US economy could “contract slightly” in H1 2008.

In the Euro-Zone the final estimate for Q4 2007 GDP was released on April 9th, confirming that growth slowed to 2.3% from 2.7% in the previous quarter. As we head into the second quarter, there are some signs of stabilisation, but financial markets look likely to remain under stress for some time. ■

Portfolio update

At the end of the quarter, the cash position was 8.7% of assets under management. The fund had 57 holdings with the following sector and country breakdown.

Sector allocation

Country allocation

We are still building the fund towards 80 or more positions and, during the quarter, we invested in three new stocks. They are Japanese convenience store operator, Ministop; jewellery retailer, Tsutsumi Jewellery and specialty chemicals producer, Shin-Etsu Polymer. We made additional investments in 34 of our holdings.

At the end of the quarter, the 10 largest positions accounted for 24.9% of total portfolio holdings.

Top 10 holdings

Holding	Sector	Country	Weight
Grammer AG	Auto Components	Germany	2.80%
Jungheinrich AG	Machinery	Germany	2.68%
Freds Inc.	Multiline Retail	United States	2.62%
Finnair Oyj	Airlines	Finland	2.55%
Miba AG	Auto Components	Austria	2.46%
Guyenne & Gascogne SA	Food & Staples Retailing	France	2.42%
LDC SA	Food Products	France	2.37%
Tessenderlo Chemie	Chemicals	Belgium	2.37%
Scholastic Corp.	Media	United States	2.33%
Koenig & Bauer AG	Machinery	Germany	2.29%

Global Small Cap Value
Fund Update**Hosiden**
reached target

Hosiden is a Japanese electronics company producing a wide range of components for diverse applications: connectors and jacks for audio-visual equipment; battery chargers, switches and LCDs for mobile phones and remote controls, to name a few. In addition, it is a major supplier and console assembler for games giant, Nintendo.

We made our first investment in Hosiden in September 2005 at around JPY 1140, after a period of relatively uninspiring earnings had depressed the stock to around book value. However, the company had a diversified product base with exposure to various promising markets and a solid, proven relationship with its main customer, Nintendo. In addition, downside protection was offered by a strong balance sheet with a healthy net cash position.

Since then, Hosiden has enjoyed impressive growth, primarily thanks to the success of Nintendo's Wii console and DS handheld console. Sales and profits for the fiscal year ended March 2008 look likely to exceed March 2005 levels by well over 50%. With the stock approaching twice book value, the net cash position reduced by share buybacks and capital expenditure and an increasing reliance on its main customer, we chose to sell our position in Hosiden during early 2008. We realised an average price of JPY 1,630, giving a total annual return of 17%. ■

Cumerio and Alfred McAlpine
Take-overs completed,
payments received

In our previous letter, we wrote of the possible take-over of Cumerio, the Belgian copper smelter, by Hamburg-based competitor Norddeutsche Affinerie. An impasse had emerged when A-Tec Industries, an Austrian engineering company, raised its stake in Cumerio to 25%, enabling it to block the deal. However, on 12 February 2008 A-Tec announced that it had accepted the offer of EUR 30 per share.

We had initially received our shares in Cumerio in April 2004, when it was spun off from Umicore. The new entity offered healthy earnings, a relatively unleveraged balance sheet, and was priced close to book value, at EUR 10.5. The EUR 30 received in the takeover gives a total annual return on the position of 48%.

The acquisition of another of our holdings, British builder Alfred McAlpine, was also completed. Even though we had turned down the offer from McAlpine's larger competitor Carillion because the bid was lower than one earlier rejected by management, the deal went through. We received payment in the form of both Carillion stock and cash, and we put the stock for sale, as it did not fulfil our value criteria. ■

Outlook

Stock markets have had an extremely negative first quarter of 2008, caused by an intensification of the credit crunch that started in the summer of 2007. We are now witnessing the impact of a credit bubble that built up over the past 3-4 years, in which money basically became too cheap. If easy access to capital made for a party, then the markets are now suffering from the hangover.

The recent bear market has been severe by any standards, but history has proven that stock markets will recover over time. During periods like this, market participants tend to reduce their shareholdings, without particular focus on the fundamental valuations of individual companies. The market value reflects the current price attributed to the company on the stock exchange. In contrast, the intrinsic business value reflects the "true" value of the company based on net asset values and earnings power, criteria which would apply if the company were traded as a whole in a take-over or merger situation. On occasion, the market value (share price) of a company accurately reflects the intrinsic business value, but most of the time it is either above or below it. The current

stock market weakness means an increasing number of companies are trading below their intrinsic value and this swells the number of stocks that fit into our investment universe and fulfil our investment criteria. At a time when sentiment on the world's stock markets is predominantly negative, this strikes us as a very positive feature.

Looking ahead, many questions remain: the possibility of more bad news from the financial sector, the scale of any recession in the US and how that spreads to affect corporate earnings and economic growth around the world. We can debate about hard or soft landings, but one thing is certain: we need the global banking sector to land on its feet again before we can truly speak of light at the end of the tunnel.

Periods of extreme uncertainty in the stock markets are not favourable for any long - only investment style wishing to generate positive returns. Investing in such conditions can demand considerable patience and it is after a quarter like the one just ended that one has to keep in mind the long-term investment philosophy behind Sparinvest Global Small Cap Value.

Looking at our portfolio today, I would argue that a recession has been priced in to most of our holdings to a large extent. This is supported by the average valuations within the Sparinvest Global Small Cap Value fund, whether in terms of price-to-book or earnings-based metrics.

We are here to produce positive returns and so can in no way be satisfied with a period of negative returns. However, we remain convinced of the strength of our portfolio. The decline in the markets does not reflect a decline in the fundamental quality of our investments. We continue to see considerable upside in them. We are confident in the future potential of our holdings. ■

Yours sincerely,

Sparinvest Asset Management

Kasper Billy Jacobsen
Lead Portfolio Manager
